SAVE AND EDIT RATES

Each time you create or edit an existing rate you will need to save the changes. To do this, simply click on the down arrow on your keyboard to move out of the record.

	Code	Description
I	AIR	Mode - Air

Editing

	Code	Description
▶	AIR	Mode - Air

After Pressing Down & Up Arrow

When the record is saved the icon at the beginning of the row will change from a cursor icon to a triangle.

Tutorial 1 - Minimum Charge & Base Rate

1.

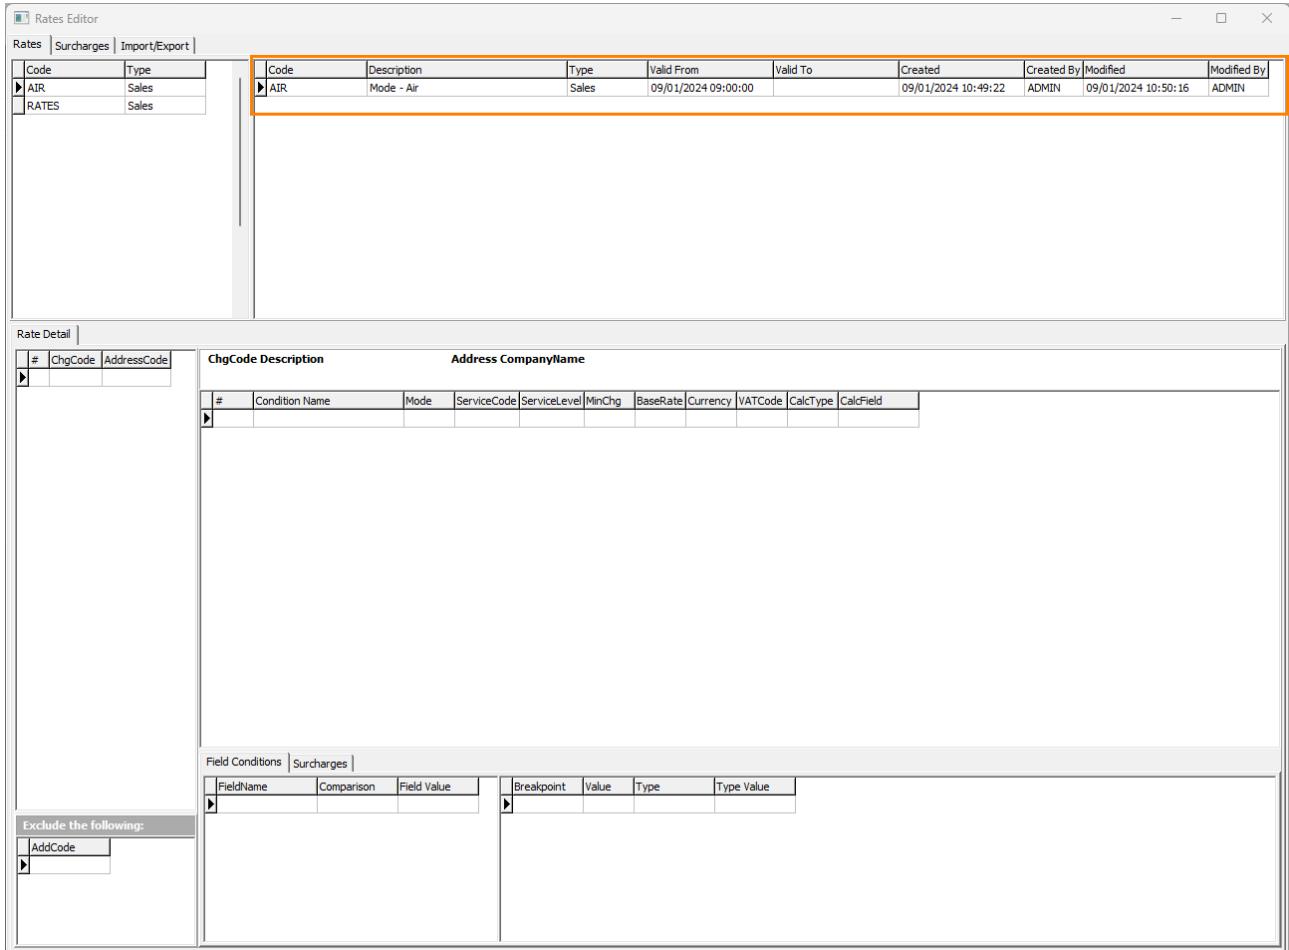

Create a new group of sales rates called 'AIR'.

Within this group, we will set up rates for charge codes that apply to only air mode charges (AFREIGHT, AHANDLING & APTTRFR)

Note: You will need to use your own defined ChargeCodes instead of the examples used in this document. i.e. AFREIGHT might be code 100 in your system.

- a. Click on the Rates Listing tab and enter the following details; as per the image below
- b. Code = 'AIR', Description = 'Mode - Air', Type = 'Sales'
- c. Save the new record by clicking on the down arrow on your keyboard.

Rates Engine Tutorials

Add The Line To This Box, Type In The New Code And It Will Automatically Create The Left Side Group Entries.

2.

Now click on the Rate Detail tab and enter the following details into the left-hand pane.

- a. In the ChgCode field enter 'AFREIGHT'.
- b. In the AddressCode enter '%'. The percentage symbol is a wildcard for ALL and therefore this rate will apply to all address codes.
- c. The ChgCode and AddressCode are the two pieces of information that are used when entering charges onto a job.

Rates Engine Tutorials

Rate Detail

#	ChgCode	AddressCode
1	AFREIGHT	%

ChgCode Description Address CompanyName

#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	Airfreight - Accra	A	%	%	25	1.35	%	%	Simple	ChargeWt

Exclude the following:

AddCode

Field Conditions | Surcharges |

FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value

3.

Now set up the rate conditions.

- Enter the Condition Name, 'Airfreight - Accra'
- Enter 'A' for the Mode
- Enter the MinChg of '25' and a BaseRate of '1.35'
- The CalcType should default to 'Simple'
- Enter 'ChargeWt' for the CalcField

Rate Detail

#	ChgCode	AddressCode
1	AFREIGHT	%

ChgCode Description Address CompanyName

#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	Airfreight - Accra	A	%	%	25	1.35	%	%	Simple	ChargeWt

Exclude the following:

AddCode

Field Conditions | Surcharges |

FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value

Rate Detail

#	ChgCode	AddressCode
1	AFREIGHT	%

ChgCode Description Address CompanyName

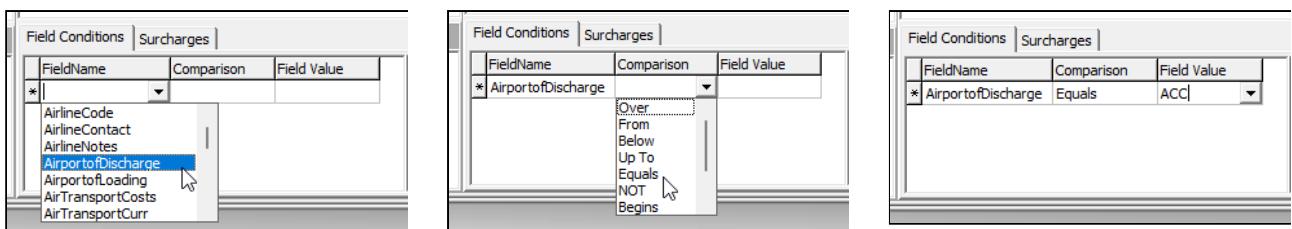

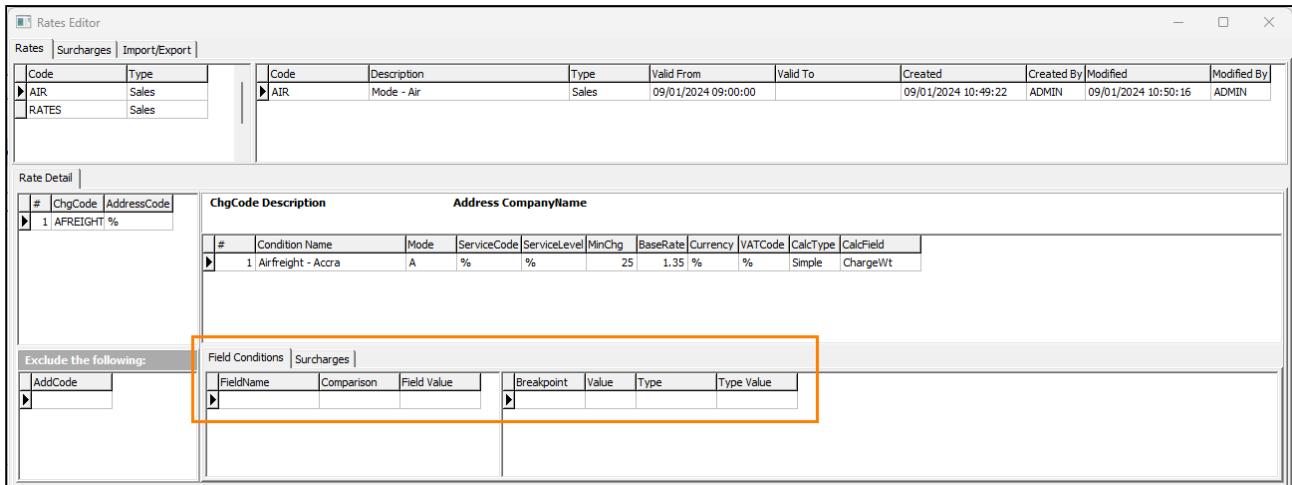

#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	Airfreight - Accra	A	%	%	25	1.35	%	%	Simple	ChargeWt

4.

Set up the extra conditions in the bottom section of the Rate Detail pane

- Enter 'AirportOfDischarge' for the FieldName
- Enter 'Equals' for the Comparison Enter 'ACC' for the Field Value

c. You have now completed the setup of the AFREIGHT rate so let's create a job and enter some charges to test it.

5.

Close the Rates Editor window and create a new Air Export job

- On the Header tab enter an Exporter code of your choice
- On the Details tab set the Destination to ACC
- On the Goods Descripton tab enter in the dimmension for 1 package of 75 x 50 x 20 with a gross weight of 8 kilos.
- Save the line and then CLOSE. The Chargeable Weight will be calculated and update automatically to the value of 12.50
- SAVE the job
- Click 'Enter Charges' on the Dashboard
- Enter your chosen Client code and then enter the ChgCode of AFREIGHT. When you tab to the next cell the ChgDesc will update to read 'Airfreight - Accra' with a ChgAmount of £25. The minimum charge has been applied here due to the calculated cost of £16.88 being lower than the set minimum.
- Now go back to the Goods Description tab and change the packages to 3 with the same dimensions. The Chargeable weight is now 37.50.
- SAVE the job
- Click on Enter charges and enter another line for AFREIGHT
- The ChgAmount is now £50.63 using the calculated rate of $37.50 * 1.35 = 50.625$

Note: that the ChgAmount in the first cost line didn't update to reflect the changes you made on the job. If you have cost lines that are required to be updated then you will need to overtype the ChgCode

in lowercase and then tab out of the field. This will force the rate to be recalculated. The same applies if you were to make an amendment to the actual rate itself. Just because a rate may increase or decrease it won't automatically update the costings of existing jobs.

Charges All Transactions Config Totals						
Sales = £75.63						
Client	InvNo	ChgCode	ChgDesc	Date	ChgAmount	ChgCurr
XYZ		AFREIGHT	Airfreight - Accra	12/03/12	25.00	GBP
XYZ		AFREIGHT	Airfreight - Accra	12/03/12	50.63	GBP

6.

For extra practice create Charge Codes for AHANDLIN and APTTRFR within the same Air Group. See the image below.

Tutorial 2 - Multiple Field Conditions

Using the ChgCode 'AFREIGHT' (created in the first tutorial). Create a new field condition. For 'Airfreight - Cairo BA'.

Tutorial 3 - demonstrates rate calculations for:

1.

Set up the rate conditions using the following steps and the image below.

- Enter the Condition Name, 'Airfreight - Cairo BA'
- Enter 'A' for the Mode
- Enter the MinChg of '60'
- The CalcType should default to 'Simple'
- Enter 'ChargeWt' for the CalcField

2.

Set up the extra conditions in to the bottom section of the Rate Detail pane

a. Enter 'AirlineCode' for the FieldName

b. Enter 'Equals' for the Comparison

c. Enter 'BA' for the FieldName

Create the second condition on a new line as follows;

d. Enter 'AirportOfDischarge' for the FieldName

e. Enter 'Equals' for the Comparison

f. Enter 'CAI' for the Field Value

You have now added a new set of conditions to the Charge Code of AFREIGHT rate so you can now test this by amending the Air Export job you created earlier.

#	ChgCode	AddressCode
1	AFREIGHT %	
2	AHANDLIN %	
3	APITRFR %	

#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	AirFreight - Accra	A	%	%	25	1.35 %	%	Simple	ChargeWt	
2	Air Freight - Cairo BA	A	%	%	60	%	%	Simple	ChargeWt	

FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value
AirlineCode	Equals	BA				
AirportOfDischarge	Equals	CAI				

3.

Close the Rates Editor window and open your Air Export job

a. On the Details tab amend the Destination to CAI

b. Set the Airline to 'BA'

c. SAVE the job

d. Click 'Enter Charges' on the Dashboard

e. On a new costing line enter the ChgCode of AFREIGHT.

Both conditions for Airline and Airport of Discharge are met and therefore the £60 minimum charge has been applied.

Tutorial 3 - Breakpoints

Still using the ChgCode 'AFREIGHT' (created in tutorial 1). Create a new field condition. For 'Airfreight - Baghdad'. This time we will not only set a minimum charge but also Breakpoints for ChargeWt.

1.

Set up the rate conditions using the following steps and the image below.

a. Condition Name, 'Airfreight - Baghdad'

b. Mode, 'A'

c. MinChg, '90'

- d. CalcType should default to 'Simple'
- e. CalcField, 'ChargeWt'

2.

Set up the extra conditions in to the bottom section of the Rate Detail pane

- a. FieldName, 'AirportOfDischarge' for the FieldName
- b. Comparison, 'Equals' for the Comparison
- c. FieldName, 'BGW' for the FieldName

3.

Set up the Breakpoints as follows;

- a. Breakpoint of 45, Value 2.20, Type 'Per' and Type Value set to 1
- b. Breakpoint of 100, Value 2.05, Type 'Per' and Type Value set to 1
- c. Breakpoint of 300, Value 2.00, Type 'Per' and Type Value set to 1
- d. Breakpoint of 500, Value 1.90, Type 'Per' and Type Value set to 1

For each breakpoint, a different value is used to calculate the rate of the (CalcField) Charge weight per kilo. For example, for a job with a charge weight of 45 kilos (the first breakpoint), the rate per kilo is calculated at £2.20, whereas a job with a charge weight of 300 kilos or over is calculated at £1.90 per kilo. Any job with a chargeable weight below the first breakpoint will be charged at the minimum rate of £90.

Rate Detail										
#	ChgCode	AddressCode	ChgCode Description			Address CompanyName				
			Air Freight							
			#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency
			1	AirFreight - Accra	A	%	%	25	1.35	%
			2	Air Freight - Cairo BA	A	%	%	60	%	%
			3	Air Freight - Baghdad	A	%	%	90	%	%
Field Conditions										
Exclude the following:			FieldName		Comparison	Field Value		Breakpoint		
			* AirportofDischarge		Equals	BGW		Value		
								Type		
								Type Value		
								45		
								2.2		
								Per		
								1		
								100		
								2.05		
								Per		
								1		
								300		
								2		
								Per		
								1		
								500		
								1.9		
								Per		
								1		

4.

Test the rate by changing the Destination of your Air Export job to BGW

- a. Increase the packages from 3 to 4 thus making a chargeable weight of 50.
- b. Enter a new costing with the charge code 'AFREIGHT'.
- c. The Charge amount will be calculated at £110 ($50 \times 2.20 = 110$)
- d. Now amend the packages to 40 so that the chargeable weight updates to 500
- e. Enter another new costing line for AFREIGHT. You will now see that the amount is calculated at £950. (500×1.90)

Charges All Transactions Config Totals							
Sales = £110.00							
Client	InvNo	ChgCode	ChgDesc	Date	ChgAmount	ChgCurr	
XYZ		AFREIGHT	Airfreight - Baghdad	22/03/12	110.00	GBP	
*XYZ		AFREIGHT	Airfreight - Baghdad	22/03/12	950.00	GBP	

Tutorial 4 - Breakpoint Percentages

The Percentage Breakpoints can be used to calculate different percentages based on defined breakpoints. The example used in this tutorial sets up rates for the Insurance value of goods above and below £45,000 applying a different percentage rate to each (0.5% and 0.65% respectively)

1.

Click on the Rate Details tab and set up a new ChargeCode INSURANC.

Rates Surcharges Import/Export	
Code	Type
► AIR	Sales
RATES	Sales
Rate Detail	
#	ChgCode AddressCode
1	AFREIGHT %
2	AHANDLIN %
3	APTRFR %
► 4	INSURANC %

2.

Set up the first Condition in the top pane as follows;

- Description 'Insurance Value £45k & Over'
- Mode 'A'
- CalcType 'Simple'
- CalcField 'InsuredValue'

Rate Detail		ChgCode Description		Address CompanyName								
#	ChgCode	AddressCode	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	AFREIGHT	%	Insurance Value £45k & Over	A	%	%	%	%	%	%	Simple	InsuranceValue
2	AHANDLIN	%										
3	APTRFR	%										
► 4	INSURANC	%										

3.

Set up the extra conditions in to the bottom section of the Rate Detail pane and enter the details as follows; FieldName 'InsuredValue' Comparison 'From' FieldValue '45000'

Insurance				
#	Condition Name	Mode	ServiceCode	ServiceLevel
► 1	Insurance Value £45k & Over	A	%	
Field Conditions		Surcharges		
FieldName	Comparison	Field Value		
► InsuranceValue	From	45000		

4.

Set up the Breakpoints as follows;

- Breakpoint '45000'
- Type 'Pct'
- Type Value '0.5'

Rate Detail													
#	ChgCode	AddressCode	ChgCode Description		Address CompanyName								
1	AFREIGHT	%	Insurance		MinChg	BaseRate	Currency	VATCode	CalcType	CalcField			
2	AHANDLIN	%	► 1	Insurance Value £45k & Over	A	%	%		%	%	Simple	InsuranceValue	
3	APTRFR	%	Field Conditions		Surcharges								
4	NSURANC	%	► InsuranceValue	From	45000	►	45000	Pct		0.5			

5.

Now set up the second Condition in the top pane as follows;

- Description 'Insurance Value under £45k'
- Mode 'A'
- CalcType 'Simple'
- Enter 'InsuredValue' for the 'CalcField'

Rate Detail													
#	ChgCode	AddressCode	ChgCode Description		Address CompanyName								
1	AFREIGHT	%	Insurance		MinChg	BaseRate	Currency	VATCode	CalcType	CalcField			
2	AHANDLIN	%	► 1	Insurance Value £45k & Over	A	%	%		%	%	Simple	InsuranceValue	
3	APTRFR	%	Field Conditions		Surcharges								
4	NSURANC	%	► InsuranceValue	From	45000	►	45000	Pct		0.5			
ChgCode Description													
Address CompanyName													
Insurance													
1	Insurance Value £45k & Over	A	%	%			%	%	Simple	InsuranceValue			
2	Insurance Value under £45k	A	%	%			%	%	Simple	InsuranceValue			

6.

Set up the extra conditions in to the bottom section of the Rate Detail pane

- FieldName 'InsuredValue'
- Comparison 'Below'
- FieldName '45000'

2	Insurance Value under £45k	A	%
Field Conditions Surcharges			
FieldName	Comparison	Field Value	
InsuranceValue	Below	45000	

7.

Set up the Breakpoints as follows;

- d. Breakpoint '0'
- e. Type 'Pct'
- f. Type Value '0.65'

Rate Detail		
#	ChgCode	AddressCode
1	AFREIGHT	%
2	AHANDLIN	%
3	APTRFR	%
► 4	INSURANC	%

ChgCode Description Address CompanyName									
#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType
1	Insurance Value £45k & Over	A	%	%		%	%	Simple	InsuranceValue
► 2	Insurance Value under £45k	A	%	%		%	%	Simple	InsuranceValue

Field Conditions Surcharges			
FieldName	Comparison	Field Value	
InsuranceValue	Below	45000	

Breakpoint	Value	Type	Type Value
► 0		Pct	0.65

8.

Using your Air Export job to test the Insurance rate

- a. On the Goods Description Tab enter the Insurance value of 44000
- b. Save the Job
- c. Enter a new costing line for 'INSURANC'
- d. The charge amount will be calculated at £286

Given that the Insurance Value is below £45,000 a 0.65% charge is calculated and applied to the costing line. 0.65% of 44,000 = 286

Charges All Transactions Config Totals							
Sales = £1346.00							
	Client	InvNo	ChgCode	ChgDesc	Date	ChgAmount	ChgCurr
XYZ			AFREIGHT	Airfreight - Baghdad	22/03/12	110.00	GBP
XYZ			AFREIGHT	Airfreight - Baghdad	22/03/12	950.00	GBP
► XYZ			INSURANC	Insurance Value under £45k	04/04/12	286.00	GBP

9.

To test the other condition for Insurance value £45,000 and over.

- e. On the Goods Description Tab enter the Insurance value of 45000
- f. Save the Job
- g. Enter another new costing line for 'INSURANC'
- h. The charge amount will now be calculated at £225

Given that the Insurance Value is now £45,000 the second condition is met and therefore a rate of 0.5% is now calculated and applied to the costing line. 0.5% of 45,000 = 225

Charges All Transactions Config Totals							
Sales = £1571.00							
	Client	InvNo	ChgCode	ChgDesc	Date	ChgAmount	ChgCurr
▶	XYZ		AFREIGHT	Airfreight - Baghdad	22/03/12	110.00	GBP
▶	XYZ		AFREIGHT	Airfreight - Baghdad	22/03/12	950.00	GBP
▶	XYZ		INSURANC	Insurance Value under £45k	04/04/12	286.00	GBP
▶	XYZ		INSURANC	Insurance Value £45k & over	04/04/12	225.00	GBP

Tutorial 5 - Surcharges - Percentage & Flat Rates

Click on the Surcharges tab at the top of the Rates Editor window. There are two parts to the Surcharges window. The top section contains the description and charge amounts for each defined surcharge and then the bottom section contains the field conditions.

Rates Editor																				
Rates Surcharges Import/Export																				
The below is a list of Surcharges which *could* be applied to rates. You would need to assign a surcharge to a rate as appropriate, as not all surcharges apply																				
<table border="1"> <thead> <tr> <th>Name</th> <th>Description</th> <th>Type</th> <th>Amount</th> <th>Applies To Nominal</th> <th></th> <th></th> </tr> </thead> <tbody> <tr> <td>▶</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>							Name	Description	Type	Amount	Applies To Nominal			▶						
Name	Description	Type	Amount	Applies To Nominal																
▶																				
The below grid allows you to define if a surcharge should only apply under give conditions, ie, certain fields have been given certain values, such as date range:																				
<table border="1"> <thead> <tr> <th>FieldName</th> <th>Comparison</th> <th>Field Value</th> </tr> </thead> <tbody> <tr> <td>▶</td> <td></td> <td></td> </tr> </tbody> </table>							FieldName	Comparison	Field Value	▶										
FieldName	Comparison	Field Value																		
▶																				

1.

Set up a Flat Rate Surcharge as follows;

- Name '£30 Flat Rate'
- Description 'Standard Flat Rate'
- Type 'Amt'
- Amount '30'
- Leave the field conditions blank as they are not required given that the charge will be applied regardless of the job details.

Rates	Surcharges	Import/Export															
<p>The below is a list of Surcharges which *could* be applied to rates. You would need to assign a surcharge to a rate to make it active.</p>																	
<table border="1"> <thead> <tr> <th>Name</th> <th>Description</th> <th>Type</th> <th>Amount</th> <th>Applies To Nominal</th> <th></th> </tr> </thead> <tbody> <tr> <td>* £30 Flat Rate</td> <td>Standard Flat Rate</td> <td>Amt</td> <td>30</td> <td></td> <td></td> </tr> </tbody> </table>						Name	Description	Type	Amount	Applies To Nominal		* £30 Flat Rate	Standard Flat Rate	Amt	30		
Name	Description	Type	Amount	Applies To Nominal													
* £30 Flat Rate	Standard Flat Rate	Amt	30														
<p>The below grid allows you to define if a surcharge should only apply under give conditions, ie, certain fields have certain values.</p>																	
<table border="1"> <thead> <tr> <th>FieldName</th> <th>Comparison</th> <th>Field Value</th> </tr> </thead> <tbody> <tr> <td>►</td> <td></td> <td></td> </tr> </tbody> </table>						FieldName	Comparison	Field Value	►								
FieldName	Comparison	Field Value															
►																	

2.

Set up a Percentage Rate Surcharge on a separate line as follows;

- Name 'FSC'
- Description 'Fuel Surcharge'
- Type 'Pct'
- Amount '20'

3.

Set the field conditions in the bottom section as follows;

- FieldName 'Mode'
- Comparison 'Equals'
- Field Value 'A'

Rates	Surcharges	Import/Export																					
<p>The below is a list of Surcharges which *could* be applied to rates. You would need to assign a surcharge to a rate to make it active.</p>																							
<table border="1"> <thead> <tr> <th>Name</th> <th>Description</th> <th>Type</th> <th>Amount</th> <th>Applies To Nominal</th> <th></th> </tr> </thead> <tbody> <tr> <td>£30 Flat Rate</td> <td>Standard Flat Rate</td> <td>Amt</td> <td>30</td> <td></td> <td></td> </tr> <tr> <td>► FSC</td> <td>Fuel Surcharge</td> <td>Pct</td> <td>20</td> <td></td> <td></td> </tr> </tbody> </table>						Name	Description	Type	Amount	Applies To Nominal		£30 Flat Rate	Standard Flat Rate	Amt	30			► FSC	Fuel Surcharge	Pct	20		
Name	Description	Type	Amount	Applies To Nominal																			
£30 Flat Rate	Standard Flat Rate	Amt	30																				
► FSC	Fuel Surcharge	Pct	20																				
<p>The below grid allows you to define if a surcharge should only apply under give conditions, ie, certain fields have certain values.</p>																							
<table border="1"> <thead> <tr> <th>FieldName</th> <th>Comparison</th> <th>Field Value</th> </tr> </thead> <tbody> <tr> <td>► Mode</td> <td>Equals</td> <td>A</td> </tr> </tbody> </table>						FieldName	Comparison	Field Value	► Mode	Equals	A												
FieldName	Comparison	Field Value																					
► Mode	Equals	A																					

4.

A Surcharge will not apply until you assign it to an existing rate.

- Switch back to the Rate Details tab
- Select the condition for Airfreight – Baghdad
- Now click on the 'Surcharges' tab from the bottom section of the Rate Details window.

#	ChgCode	AddressCode
1	AFREIGHT	%
2	AHANDLIN	%
3	APTRFR	%
4	INSURANC	%

#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	AirFreight - Accra	A	%	%	25	1.35	%	%	Simple	ChargeWt
2	Air Freight - Cairo BA	A	%	%	60		%	%	Simple	ChargeWt
3	Air Freight - Baghdad	A	%	%	90		%	%	Simple	ChargeWt

FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value
AirportofDischarge	Equals	BGW	45	2.2	Per	1
			100	2.05	Per	1
			300	2	Per	1
			500	1.9	Per	1

5.

From the list of 'Available Surcharges' select the '£30 Flat Rate' and then click on top arrow to move it into the 'Assigned Surcharges'

3	Air Freight - Baghdad	A	%	%	90	%	%	Simple	ChargeWt
---	-----------------------	---	---	---	----	---	---	--------	----------

FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value
AirportofDischarge	Equals	BGW	45	2.2	Per	1
			100	2.05	Per	1
			300	2	Per	1
			500	1.9	Per	1

Name	Description	Type	Amt	Applies To Nominal
£30 Flat Rate	Standard Flat Rate	Amt	30	
FSC	Fuel Surcharge			

- Notice that the Surcharges tab now changes colour from Grey to Blue. This acts as a visible indicator to the user and denotes that a surcharge has been applied.

Name	Description	Type	Amt	Applies To Nominal
FSC	Fuel Surcharge			
£30 Flat Rate	Standard Flat Rate	Amt	30	

Name	Description	Type	Amt	Applies To Nominal
£30 Flat Rate	Standard Flat Rate	Amt	30	
FSC	Fuel Surcharge	Pct	20	

6.

Now move the surcharge for 'RFSC' from the 'Available Surcharges' section into the 'Assigned Surcharges' section by clicking on the top arrow.

The sequence of the surcharges must be applied in the correct order.
(see overview section 'Surcharge Sequence Order')

7.

Using your Air Export job to test the surcharge

- a. Amend the packages back to 4 so that the chargeable weight is 50
- b. Save the Job
- c. Enter a new costing line for AFREIGHT
- d. The charge amount will be calculated at £168
- e. Given the Chargeable weight of 50Kg the following calculation applies.

The condition entry has a Breakpoint of £2.20 per kilo, so the calculated amount would be £168 (50 * 2.20) + £30 + 20% calculated as follows;

$$40 * 2.20 = 110$$

$$110 + 30 = 140$$

$$20\% \text{ of } 140 = 28$$

$$140 + 28 = 168$$

Charges All Transactions Config Totals						
Sales = £1228.00						
Client	InvNo	ChgCode	ChgDesc	Date	ChgAmount	ChgCurr
XYZ		AFREIGHT	Airfreight - Baghdad	22/03/12	110.00	GBP
XYZ		AFREIGHT	Airfreight - Baghdad	22/03/12	950.00	GBP
XYZ		AFREIGHT	Airfreight - Baghdad	28/03/12	168.00	GBP

Tutorial 6 - Rate on Rate Calculations - Percentage of ChargeCode Costing Line

In some cases, there may be a requirement to set up a Charge Code to calculate a percentage charge of another ChargeCode and show it as a separate costing line.

The example used in this tutorial creates a CAF rate which applies 10% of the SFREIGHT costing by setting the CalType to 'ChgPct' and the CalcField to SFREIGHT.

The SFREIGHT charge would need to be entered as a costing line (Type set to Invoice) before entering the CAF charge. It would then look something like the image below.

SFREIGHT	Seafreight to Alexandria	14/05/12	212.93	GBP	Invoice
CAF	Currency Adjustment Factor	14/05/12	21.29	GBP	Invoice

1.

Click on the Rate Details tab and set up a new ChargeCode CAF

Rate Detail		
#	ChgCode	AddressCode
► 1	CAF	%

2.

Set up the Condition in the top pane as follows;

- Description 'Currency Adjustment Factor'
- Mode 'S'
- CalcType 'ChgPct'
- CalcField 'SFREIGHT'

Rate Detail			ChgCode Description Address CompanyName										
#	ChgCode	AddressCode	#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
► 1	CAF	%	► 1	Currency Adjustment FActor	S	%	%			%	%	ChgPct	SFREIGHT

3.

You can optionally set up extra conditions should they be required for specific ports etc otherwise leave this area blank.

4.

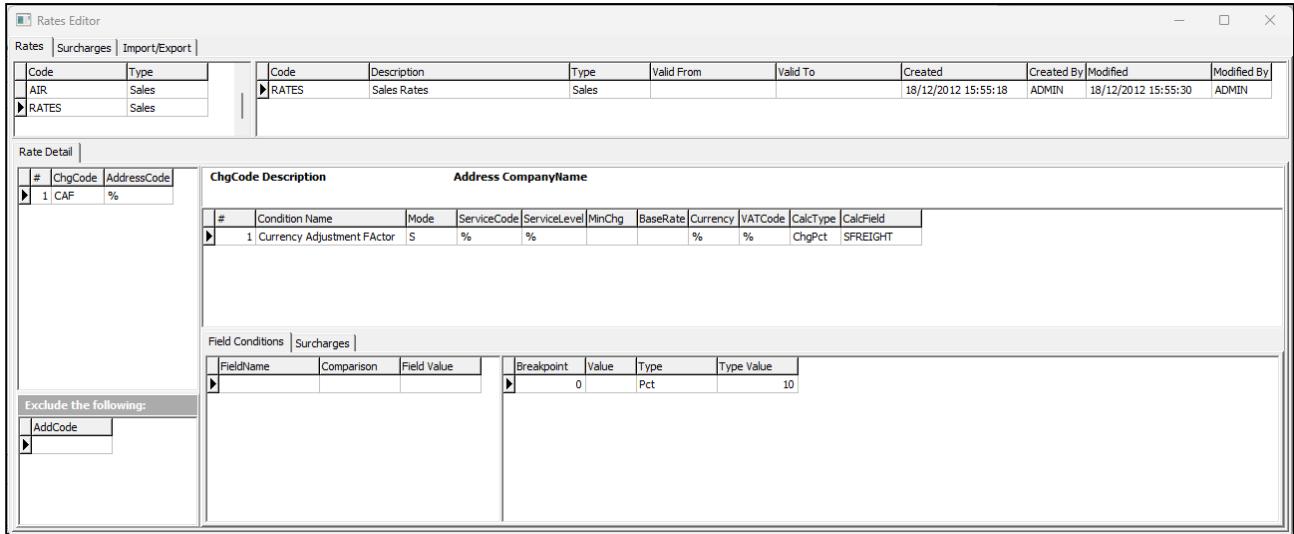

Set up the Breakpoints as follows;

- Breakpoint '0'
- Leave the Value field empty
- Type 'Pct'
- Type Value '10'

Rate Detail			ChgCode Description Address CompanyName										
#	ChgCode	AddressCode	#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
► 1	CAF	%	► 1	Currency Adjustment FActor	S	%	%			%	%	ChgPct	SFREIGHT

Field Conditions				Surcharges			
FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value	
►			► 0	Pct		10	

The final result:

5.

Test the rate using any job that matches your field condition; in this case any Sea Freight job as the only condition we have set up is the Mode 'S'

- Ensure that the job already has a costing line SFREIGHT
- Enter a new costing line for CAF
- The charge amount will be calculated at 10% of the SFREIGHT amount.

SFREIGHT	Seafreight to Alexandria	14/05/12	212.93	GBP	Invoice
CAF	Currency Adjustment Factor	14/05/12	21.29	GBP	Invoice

Tutorial 7 - Advanced Field Conditions - Job Field Formulas

The extra field conditions can also be used to perform advanced calculations against a field such as Cube or Gross before the CalcField is used to look up the breakpoint value. The CalcField can also be used to perform calculations and a combination of the two can be used together to perform complex rate conditions.

The example used in this tutorial shows you how to create a rate called COLLECT which has two separate condition lines. These are used to determine whether to use Gross or Cube depending on which is the greater before looking up the breakpoint value. The extra conditions divide the Cube by 2 and then check to see if the result is Greater Than or Less Than the Gross. The CalcField is then used to perform another calculation and uses the result to look up the breakpoint value.

Set up the two parts of the conditions for the COLLECT rate as follows;

1.

Click on the Rate Details tab and create up a new ChargeCode COLLECT with an address code of '%'.

Rate Detail		
#	ChgCode	AddressCode
► 1	COLLECT	%

2.

Set up the first Condition in the top pane as follows;

- Description 'Collect (Sea) Cube >= Gross' ('Cube >= Gross' in the description is only for the purpose of testing the rate functionality so that you can see which condition is being met when entering the charge code on the costing line)
- Mode 'S'
- CalcType 'Simple'
- CalcField '(Cube/2) *1000'

Rate Detail			ChgCode Description										Address CompanyName				
#	ChgCode	AddressCode	#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField				
► 1	COLLECT	%	► 1	Collect (Sea) Cube >= Gross	S	%	%	%	%	%	%	Simple	(Cube/2)*1000				

3.

Set up the extra conditions in to the bottom section of the Rate Detail pane

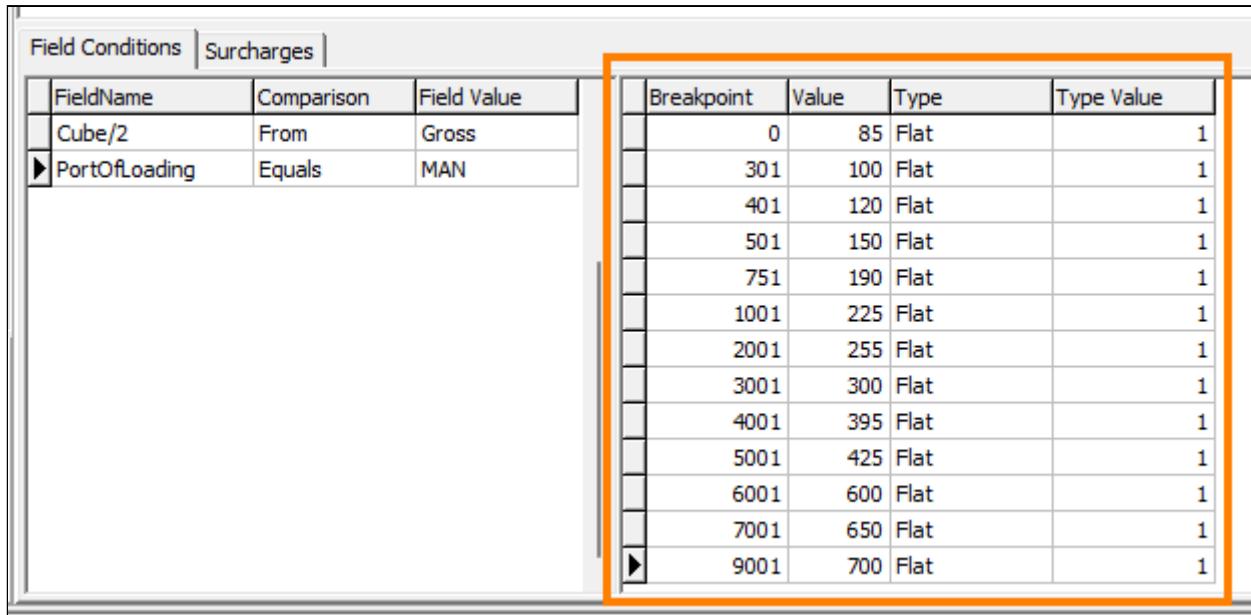

- FieldName 'Cube/2'
- Comparison 'From'
- FieldValue 'Gross' Set up another Extra condition as follows;
- FieldName 'PortOfLoading'
- Comparison 'Equals'
- FieldValue 'MAN'

Field Conditions			Surcharges	
FieldName	Comparison	Field Value		
Cube/2	From	Gross		
► PortOfLoading	Equals	MAN		

4.

Set up the Breakpoints as follows;

- Breakpoint '0'
- Value '85'
- Type 'Flat'
- Type Value '1'
- Set up all of the Breakpoints from 0 to 9001 as per the screenshot below.

Field Conditions | Surcharges

FieldName	Comparison	Field Value
Cube/2	From	Gross
PortOfLoading	Equals	MAN

Breakpoint	Value	Type	Type Value
0	85	Flat	1
301	100	Flat	1
401	120	Flat	1
501	150	Flat	1
751	190	Flat	1
1001	225	Flat	1
2001	255	Flat	1
3001	300	Flat	1
4001	395	Flat	1
5001	425	Flat	1
6001	600	Flat	1
7001	650	Flat	1
9001	700	Flat	1

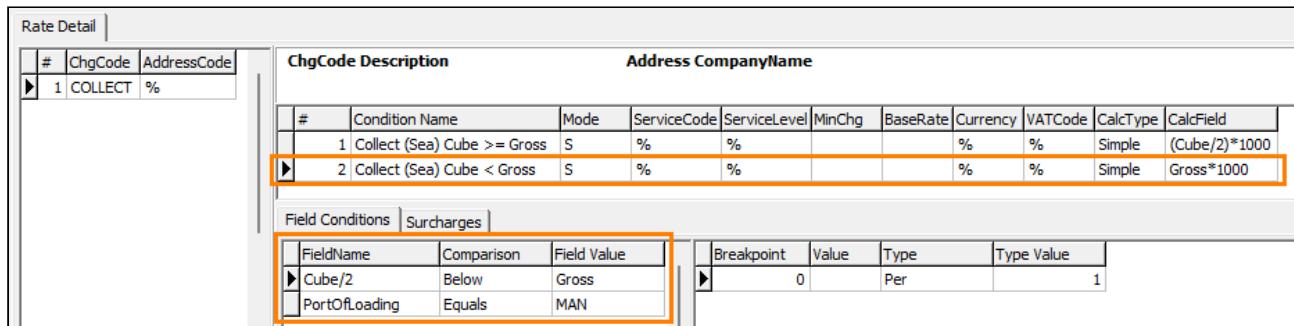

5.

Now set up the second condition in the top pane in the same way as the first one using steps 2 to 4 but with the following changes;

Step 2a set the Description as 'Collect (Sea) Cube < Gross'

Step 2d CalcField 'Gross *1000'

Step 3e Comparision 'Below'

Rate Detail |

#	ChgCode	AddressCode
1	COLLECT	%

ChgCode Description | Address CompanyName

#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
1	Collect (Sea) Cube >= Gross	S	%	%			%	%	Simple	(Cube/2)*1000
2	Collect (Sea) Cube < Gross	S	%	%			%	%	Simple	Gross*1000

Field Conditions | Surcharges |

FieldName	Comparison	Field Value
Cube/2	Below	Gross
PortOfLoading	Equals	MAN

Breakpoint	Value	Type	Type Value
0	Per		1

6.

Ensure you set up the same breakpoints as in Step 4

Field Conditions			Surcharges			
FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value
► Cube/2	Below	Gross	0	85	Flat	1
► PortOfLoading	Equals	MAN	301	100	Flat	1
			401	120	Flat	1
			501	150	Flat	1
			751	190	Flat	1
			1001	225	Flat	1
			2001	255	Flat	1
			3001	300	Flat	1
			4001	395	Flat	1
			5001	425	Flat	1
			6001	600	Flat	1
			7001	650	Flat	1
			9001	700	Flat	1

7.

You should now have the COLLECT rate set up with the two conditions as per the two images below.

Rates Editor						
Rates		Surcharges		Import/Export		
Code	Type	Code	Description	Type	Valid From	Valid To
AIR	Sales	► RATES	Sales Rates	Sales		18/12/20
► RATES	Sales					

Rate Detail					
#	ChgCode	AddressCode	ChgCode Description	Address	CompanyName
► 1	COLLECT	%			

ChgCode Description										
#	Condition Name	Mode	ServiceCode	ServiceLevel	MinChg	BaseRate	Currency	VATCode	CalcType	CalcField
► 1	Collect (Sea) Cube >= Gross	S	%	%			%	%	Simple	(Cube/2)*1000
	2 Collect (Sea) Cube < Gross	S	%	%			%	%	Simple	Gross*1000

Field Conditions				Surcharges			
FieldName	Comparison	Field Value	Breakpoint	Value	Type	Type Value	
► Cube/2	From	Gross	0	85	Flat	1	
► PortOfLoading	Equals	MAN	301	100	Flat	1	
			401	120	Flat	1	
			501	150	Flat	1	
			751	190	Flat	1	
			1001	225	Flat	1	
			2001	255	Flat	1	
			3001	300	Flat	1	
			4001	395	Flat	1	
			5001	425	Flat	1	
			6001	600	Flat	1	
			7001	650	Flat	1	
			9001	700	Flat	1	

Condition 1: Cube >= Gross

Rate Detail		ChgCode Description Address CompanyName											
#	ChgCode	AddressCode											
►	1	COLLECT %											

a. All conditions for the 'Collect (Sea) Cube >= Gross' rate will be met and this description will appear on the Costing line with a charge amount of £395.

Cube = 10 and Gross = 4, the Cube divided by 2 = 5 which is greater than the Gross value of 4. Then the Cube/2 *1000 = 5000 giving a breakpoint value of £395

10.

Now that the 2nd condition by amending the Cube to 2 so that it is less than the Gross of 4

a. Save the Job

b. Enter another COLLECT charge code on the costing line.

c. The conditions for the 'Collect (Sea) Cube < Gross' rate will be entered as the description with a breakpoint amount of £300.

Cube = 2 and Gross = 4, the Cube divided by 2 = 1 which is less than the Gross value of 4. Then Gross*1000 = 4000 giving a breakpoint value of £300

COLLECT	Collect (Sea) Cube >= Gross	18/05/12	395.00	GBP
COLLECT	Collect (Sea) Cube < Gross	18/05/12	300.00	GBP

11.

Once you are happy that the rate conditions have been set up and working correctly, you can if you wish amend the two Description names to be the same, such as 'Collect (Sea)'. The system will apply the correct rate in the background depending on the defined conditions.
